August 2018

Dear Parents/Guardians:

Increasingly, we have been made aware of the number of children with life-threatening food allergies. Foods that most commonly cause allergic symptoms in children are peanuts, tree nuts, milk, eggs, soy, fish and wheat.

Our goal is to make Commack Schools a safe place for every child. To avoid causing a potentially life-threatening reaction, we implement several procedures for managing foods in the school. Some of the precautions we take include hand washing and asking children not to share food or utensils. In addition, we have set up tables or areas of the cafeteria for children with food allergies.

If you have any specific questions, please contact the school.

Thank you.

Sincerely,

Michelle Tancredi-Zott
