

CENTROIDS

A median is drawn from the vertex to the midpoint of the opposite side. The centroid is the intersection of the medians

1) In the diagram below of $\triangle ACE$, medians \overline{AD} , \overline{EB} , and \overline{CF} intersect at G . The length of \overline{FG} is 12 cm.

What is the length, in centimeters, of \overline{GC} ?

1) 24

2) 12

3) 6

4) 4

$$\frac{GC}{FG} = \frac{2}{1}$$

$$\frac{x}{12} = \frac{2}{1}$$

$$x = 24$$

The parts of the centroid are in a ratio of 2:1

2) In the diagram of $\triangle ABC$ below, medians \overline{AD} and \overline{BE} intersect at point F . If $AF = 6$, what is the length of \overline{FD} ?

1) 6

2) 2

3) 3

4) 9

$$\frac{AF}{FD} = \frac{2}{1}$$

$$\frac{6}{x} = \frac{2}{1} \quad 2x = 6 \quad x = 3$$

3) In $\triangle ABC$ shown below, P is the centroid and $BF = 18$. What is the length of \overline{BP} ?

1) 6

2) 9

3) 3

4) 12

If comparing part of a centroid to the whole:

$$\overline{BP} = \frac{2}{3} \overline{BF}$$

$$\overline{BP} = \frac{2}{3} (18)$$

$$\overline{BP} = 12$$

4) In the diagram below of $\triangle ABC$, medians \overline{AD} , \overline{BE} , and \overline{CF} intersect at G . If $CF = 24$, what is the length of \overline{FG} ?

1) 8

2) 10

3) 12

4) 16

$$\overline{FG} = \frac{1}{3} \overline{CF}$$

$$\overline{FG} = \frac{1}{3} (24)$$

$$\overline{FG} = 8$$

As shown below, the medians of $\triangle ABC$ intersect at D . If the length of \overline{BE} is 12, what is the length of \overline{BD} ?

- 1) 8
- 2) 9
- 3) 3
- 4) 4

$$\overline{BD} = \frac{2}{3} \overline{BE}$$

$$\overline{BD} = \frac{2}{3} (12)$$

$$\overline{BD} = 8$$

In the diagram of $\triangle ABC$ below, Jose found centroid P by constructing the three medians. He measured \overline{CF} and found it to be 6 inches. If $PF = x$, which equation can be used to find x ?

- 1) $x + x = 6$
- 2) $2x + x = 6$
- 3) $3x + 2x = 6$
- 4) $x + \frac{2}{3}x = 6$

In the diagram below, point P is the centroid of $\triangle ABC$. If $PM = 2x + 5$ and $BP = 7x + 4$, what is the length of \overline{PM} ?

- 1) 9
- 2) 2
- 3) 18
- 4) 27

$$\frac{\overline{BP}}{\overline{PM}} = \frac{2}{1}$$

$$\frac{7x+4}{2x+5} = \frac{2}{1}$$

$$2(2x+5) = 7x+4$$

$$4x+10 = 7x+4$$

$$\begin{array}{r} -4x \quad -4 \\ \hline 6 = 3x \end{array}$$

$$3x = 6$$

$$x = 2$$

The three medians of a triangle intersect at a point. Which measurements could represent the segments of one of the medians?

- 1) 2 and 3
- 2) 3 and 4.5
- 3) 3 and 6
- 4) 3 and 9

- 9) In the diagram below of $\triangle TEM$, medians \overline{TB} , \overline{EC} , and \overline{MA} intersect at D , and $TB = 9$. Find the length of \overline{TD} .

$$TD = \frac{2}{3}(TB)$$

$$TD = \frac{2}{3}(9)$$

$$TD = 6$$

- 10) In the diagram below, \overline{QM} is a median of triangle PQR and point C is the centroid of triangle PQR . If $QC = 5x$ and $CM = x + 12$, determine and state the length of \overline{QM} .
