

Math Homework Policy

Math homework is graded using a 5–point system. In order to earn all 5 points, the work must be on time, every problem attempted, all work shown and the directions followed. All homework will be modeled after the work done in class, so students are strongly encouraged to look over their notes before starting and while doing their assigned homework. Here is how the points will be awarded for homework this year:

- **5 points:** If all questions are completed, work is shown, and directions are followed.
- **4 points:** If an incomplete homework is made up.
- **3 points:** If an assignment is incomplete or if the directions were not followed correctly (Example, if the directions state “Solve and Check” and the student only solves).
- **0 points:** If less than half the assignment is completed or if the assignment is missing (not done or otherwise). **All assignments earning a 0–grade can be made up to earn a 3–point score.** This encourages students to go back and get the practice that they need instead of giving up.
